
Richard L. Valliant

May 12, 2016

Business Address:

Joint Program for Survey Methodology
Universities of Michigan & Maryland
1218 Lefrak Hall
College Park MD 20742

(301) 405-0932
FAX: (301) 314-7912
Email: rvallian@umd.edu

Summary:

Dr. Richard L. Valliant is a Research Professor at the University of Michigan and the Joint Program for Survey Methodology at the University of Maryland. He has over 40 years of experience in survey sampling, estimation theory, and statistical computing. He was formerly an Associate Director at Westat and a mathematical statistician with the Bureau of Labor Statistics. He has a range of applied experience in survey estimation and sample design on a variety of establishment and household surveys. He is also a Fellow of the American Statistical Association and has been an editor of several statistical journals.

Education:

Ph.D., Johns Hopkins University (Biostatistics), 1983
M.S., Cornell University (Statistics) 1975
B.S., University of Arkansas (Mathematics) 1972

Professional Experience:

2003 – present	Research Professor, Institute for Social Research University of Michigan
2010 – present	Associate Director, Joint Program in Survey Methodology, University of Maryland
1998 – 2003	Associate Director Westat Rockville MD
1983 – 1997	Mathematical statistician Bureau of Labor Statistics Washington DC
1981 – 1983	Consultant at Westat and full-time student at Johns Hopkins

	University, Baltimore MD
1980 – 1981	Manager/statistician, Arthur Young & Company Washington DC
1975 – 1980	Statistician, Westat Rockville MD

Memberships and Honors:

Elected member of the International Statistical Institute 2001
Fellow of American Statistical Association, 1992
Phi Beta Kappa, 1972

American Statistical Association, member
International Association of Survey Statisticians, member
Washington Statistical Society, member

Center for Disease Control, 2008 Statistical Science Awards— Applied Paper
Category for “Cell Collapsing in Poststratification” with J.J. Kim and J. Li

Opponent for the dissertation defense of Sixten Lundström, Stockholm
University, Stockholm Sweden, October 1997

Commissioner’s Eminent Achievement Award, 1996, for work on the formula
bias question in the Consumer Price Index

Department of Labor Secretary’s Exceptional Achievement Award, 1994, for
work on redesign of the Current Population Survey

Other Professional Activities:

Associate editor, *Survey Methodology*, 1996-2007

Associate editor, *Journal of Official Statistics*, 2003-2010

Associate editor, *Journal of the American Statistical Association—Applications
and Case Studies*, 1996-1999

Associate editor, *Journal of the American Statistical Association—Theory and
Methods*, 1989-1993

Referee for the *Journal of the American Statistical Association*, *Australian and
New Zealand Journal of Statistics*, *Journal of the Royal Statistical Society
B*, *Journal of Business and Economic Statistics*, *Biometrika*, *Cancer &
Epidemiology*, *Communications in Statistics*, *Computational Statistics and
Data Analysis*, *The American Statistician*, *Canadian Journal of Statistics*,
East African Journal of Science, *International Journal of Public Opinion
Research*, *Journal of Official Statistics*, *Journal of Statistical Planning
and Inference*, *Journal of Statistical Software*, *Metrika*, *Naval Logistics*

Research Journal Pakistan Journal of Statistics, Public Opinion Quarterly, Quantitative Criminology, Sociological Methodology, Statistical Methodology, Survey Methodology, Survey Research Methods, TEST, Journal of Survey Statistics and Methodology.

- Member, Committee on National Statistics, National Academy of Sciences: Reengineering the Census Bureau's Annual Economic Surveys, 2015-2017
- Member, National Agricultural Statistics Service Expert Panel on Federal Statistics on Women and Beginning Farmers in U.S. Agriculture, 2015-2016
- Member, American Statistical Association Census Advisory Council, 2007-2009
- Member, Gemini Project Expert Panel, Consumer Expenditure Survey, Bureau of Labor Statistics, 2009.
- Member, Morris H. Hansen Memorial Lecture Committee, Washington Statistical Society, 2008-2011
- Member, Survey Costs Task Force on the Current Population Survey, Census Bureau, 2010
- Co-organizer University of Maryland Statistics Day, April, 2004
- Member, National Academy of Sciences panel to evaluate research and development statistics at the National Science Foundation, 2003-2004
- Member, National Academy of Sciences panel to evaluate sample design and estimation strategy for group quarter's data in the American Community Survey, 2010-2012
- Invited reviewer, 2003 ACS Voluntary/Mandatory Analysis Review, Census Bureau, 2011
- Book reviewer for John Wiley & Sons, Springer-Verlag.
- Grant reviewer for National Science Foundation, National Security Agency, Marsden Fund
- Adjunct Professor, Johns Hopkins University 1995-2002
Adjunct Professor, University of Maryland 1998-2001
Research Professor, University of Maryland 2001-present
- Member of Washington Statistical Society Fellows Committee, 1994-1995
- Representative-at-large, Washington Statistical Society, 1991-1993, chairman of Jacobs Memorial Award Committee

Papers in Process or under Review

- Lee, S., Suzer-Gurtekin, T., Wagner, J., and Valliant, R., “Exploring of Nonresponse and Measurement Error in a Study Using Respondent Driven Sampling: Focus on Recruitment Process and Network Size Reports”, submitted.
- Valliant, R., Dever, J.A., Kreuter, F. “Effects of Varying Unit Sizes in Three-stage Sampling.”

Teaching Experience

Semester courses

- “Practical Tools for Sample Design and Weighting,” Joint Program for Survey Methodology, University of Maryland and University of Michigan, 2013, 2014, 2015
- “Case Studies in Weighting and Estimation,” Joint Program for Survey Methodology, University of Maryland and University of Michigan, 2007, 2008, 2010.
- “Statistical Methods I & II”, Joint Program for Survey Methodology, University of Maryland and University of Michigan, 2006-2007, 2008-2009.
- “Applied Sampling”, Joint Program for Survey Methodology, University of Maryland and University of Michigan, Summer 2004, 2008.
- “Prediction Approach to Finite Population Sampling”, Joint Program for Survey Methodology, University of Maryland, 2003, 2005, 2009, 2011.
- “Sampling Theory,” Joint Program for Survey Methodology, University of Maryland, Summer 2003, 2005, 2006, Spring 2016.
- “Inference from Complex Surveys,” Joint Program for Survey Methodology, University of Maryland, Spring 1998-2006 (with K. Rust), 2008, 2010-2012, 2014 (with Robert Fay)
- “Topics in Sampling” Joint Program for Survey Methodology, University of Maryland, 2002, 2003 (with M. Brick), 2012, 2014 (with K. Rust).
- “Finite Population Prediction Theory”, readings course for Ph.D. student, Joint Program for Survey Methodology, University of Maryland, Spring 2002.
- Ph.D. seminar, Joint Program for Survey Methodology, University of Maryland, Spring-Fall 2002, Spring 2003, Spring 2011.

Short courses

- “Practical Tools for Designing and Weighting Survey Samples” (with Jill Dever)
2014, 2015 Joint Program for Survey Methodology short course series
2014 Food and Drug Administration
2013 59th World Statistics Congress, Hong Kong
- “Model-based and Model-assisted Estimation in Surveys”—presented at 2014
International Methodology Symposium sponsored by Statistics Canada
- “Weighting Survey Samples, July 22, 2014, at European Congress of
Methodology held at Utrecht University, The Netherlands
- “Introduction to Survey Estimation”—a short course for the Joint Program for
Survey Methodology, 2000-2010 (with David Morganstein)
- “Creating and Updating Price Indexes: Theory and Practice”— a short course for
the Joint Program for Survey Methodology, 2000-2004, 2006, 2008, 2010,
2013, 2016 (with Dennis Fixler)
- “Establishment Surveys”—a short course for the Joint Program for Survey
Methodology, 2005, 2008, 2010 (with Philip Kott)
- “Model-based Survey Sampling: Theory and Practice”— a short course for the
Joint Program for Survey Methodology, 2003, and at the Joint Statistical
Meetings, American Statistical Association 2009 (with Alan Dorfman)
- “Introduction to Sample Surveys,” Johns Hopkins University, Spring quarter
1995.
- “Model-based Sample Design and Estimation Procedures”—a short course for the
Washington Statistical Society, 1989 (with Robert Casady).

Teaching assistantships

- Graduate teaching assistantship, Johns Hopkins University, 1981-83.
- Graduate teaching assistantship, Cornell University, 1974-75.

Ph.D. Students:

- Tuba Suzer Gurtekin, 2013: “Statistical Error Models for Multi-Mode Survey
Estimators”
- Timothy Kennel, 2013: “Using Generalized Linear Models in Survey Estimation”
- Jeffrey Gonzalez, 2012: “The Use of Responsive Split Questionnaires in a Panel
Survey”
- Kimberly A. Henry, 2011: “Weight Adjustment Methods and Their Impact on
Sample-Based Inference”
- Dan Liao, 2010: “Collinearity Diagnostics for Complex Survey Data”

Jill A. Dever, 2008: "Sampling Weight Calibration with Estimated Control Totals"

Jianzhu Li, 2007: "Regression Diagnostics for Complex Survey Data: Identification of Influential Observations"

Sunghye Lee, 2004: "Statistical Estimation Methods in Volunteer Panel Web Surveys"

Presentations/Seminars:

Invited talk "Inference with Non-probability Samples", at Ross-Royall Symposium on Population Inference, Feb. 26, 2016.

Invited talk for Washington Statistical Society conference on Non-probability Samples, Sep. 9, 2015.

"Variance Estimation for Complex Surveys". Webinar presented for Survey Research Methods section, American Statistical Association, 2014.

"Surveys, Weights, and Synthetic Populations". Virginia Tech seminar, 2014.

"Uses of Models in Survey Design and Estimation". Census Bureau Distinguished Lecture. Also presented at Washington Statistical Society, National Center for Health Statistics, and Westat (2012)

"Effects of Collinear Predictors in Linear Models Fitted with Survey Data", seminar for Michigan Program in Survey Methodology, College Park MD, 2012.

"Regression Diagnostics for Complex Survey Data", Stata Users' Conference. Washington DC, 2009.

"Estimating Propensity Adjustments for Volunteer Web Surveys," Institut für Arbeitsmarkt und Berufsforschung der Bundesagentur für Arbeit, Nürnberg Germany, 2009.

"Survey Sample Coordination", 3-day Summer School co-arranged by Örebro University and Statistics Sweden, in Örebro Sweden, 2007.

Invited discussant of Roderick J.A. Little JPSM Distinguished Lecture, Spring 2007. Title of Little talk: "Wait! Should We Use the Survey Weights to Weight?"

"Weight Adjustments for the Grouped Jackknife Variance Estimator", Washington Statistical Society seminar, 2006.

"Cell Collapsing in Poststratification", Washington Statistical Society seminar (with Jay J. Kim, National Center for Health Statistics), 2005.

"An Application of models in audit sampling", Seminar at the Dept. of Mathematics, University of Maryland, 2005.

- “Variance Estimation with Hot Deck Imputation: A Simulation Study of Three Methods”, seminar at the Institute for Social Research, University of Michigan, 2005.
- “Statistical Quality in the NSF Data Collections” with Barbara A. Bailar, Joint Statistical Meetings, Toronto, Section on Government Statistics, 2004.
- “Balanced Sampling and Model-based Estimation”, seminar at the Bureau of the Census, 2004.
- “The Effect of Multiple Weight Adjustments on Variance Estimation”, Seminar at Joint Program for Survey Methodology, 2003.
- Discussion of papers on multiphase sampling at 2003 Joint Statistical Meetings, San Francisco, including “Jackknife Variance Estimation for Two-Phase Sampling in the National Resources Inventory” by J. Opsomer, W.A. Fuller, X. Li; “Efficient Replication Variance Estimation for Two-phase Sampling” by R.R. Sitter, J.-K. Kim; “Variance Estimation for the Special Studies of the National Assessment for Educational Progress (NAEP)” by H. Lee, J.-K. Kim, S. Dohrmann; and “Applications of Nonparametric Hierarchical Models to Surveys with Clustered Outcome” by H. Zheng, R.J.A. Little.
- “Variance Estimation for the General Regression Estimator”, Seminar at George Mason University, 2001.
- “Uses of Models in the Estimation of Price Indexes”, Seminar at Joint Program for Survey Methodology, 2000.
- Discussant of “Variance Estimation for the Consumer Price Index” by S. Jacobson, Washington Statistical Society, 1999.
- “Stratification by Size Revisited,” Seminar at Statistics Sweden, Stockholm, 1997.
- “An Application of Mathematical Programming to Sample Allocation,” Seminar for the Washington Statistical Society, 1997.
- “Variance Estimation for Business Surveys,” U.S. Department of Agriculture Graduate School, 1995.
- “Establishment Surveys,” lecture presented for the Joint Program in Survey Methodology, University of Maryland, 1994.
- “Statistical Problems in Estimating the U.S. Consumer Price Index,” presented at International Conference on Establishment Surveys, 1993, Buffalo, New York.
- “Post-stratification” - seminar for the Washington Statistical Society, 1992; also presented at George Mason University, 1993.
- “Longitudinal Smoothing of Price Index Variances,” presented at Statistics Canada Symposium, 1992.

Discussion of paper on foundations of sampling at 1992 American Statistical Association meetings.

Discussion of papers on outlier analysis at 1991 Annual Research Conference sponsored by U.S. Bureau of the Census.

“Price Index Estimation from Panel Surveys” - presented at the 1989 meetings of the International Statistical Institute.

“Model-based Sampling” - seminar presented to a class in “Advanced Topics in Survey Sampling” at the U.S. Department of Agriculture Graduate School, 1989.

“Comparisons of Variance Estimators in Systematic and Random Sampling” - seminar for the U.S. Bureau of the Census, 1988.

“Price Index Estimation under an Autoregressive Model” - seminar for the Washington Statistical Society, 1987.

“Generalized Variance Functions in Sample Surveys” - seminars for the Washington Statistical Society, 1986, and Johns Hopkins University, Dept. of Biostatistics, 1988.

Presentations at the annual meetings of the American Statistical Association, 1984, 1986-1988, 1990-92, 1994, 1995, 1997, 1999, 2002, 2004.

Project Experience:

University of Michigan 2003-present

Health and Retirement Study—consultation on weighting cohort samples and design of screening sample for cohorts recruited in 2004, 2010-2011; analyses of screening results from the 2010-2011 samples. Design of sample allocation for the Late Baby Boomer cohort recruited in 2016.

Kuwait National Nutrition Survey—advised Kuwaiti Institute for Scientific Research on computation of weights and their use in statistical analysis in the 2008-2009 health and nutrition examination survey. Computed nonresponse adjustments and raking adjustments to population counts for their multistage household survey.

Estimated Control Calibration—Dr. Valliant and his Ph.D. students developed variance estimators that account for control values that are themselves estimates from other samples. Linearization and jackknife variance estimators were formulated for poststratified and general regression estimators. This work is being performed with grant funding from the National Science Foundation.

Estimation using Internet Panels of Volunteers—He and his Ph.D. students evaluated the use of calibration estimators to make population inferences from non-probability samples.

Arbitron—statistical analyst on a variety of issues related to radio rating, including combining estimates from different surveys to reduce sampling error of estimates; modeling the relationship of estimates from personal people meters and paper diaries; identification of unreliable diary reports using regression and classification trees.

State of Maryland—statistical consultant on analyses of survey data on adult and youth smoking behaviors. These surveys monitor Maryland's progress in reducing the use of tobacco products using the 2006 Maryland Adult and Youth Tobacco Surveys.

Internal Revenue Service—derived theory for estimating the variance of annual change in IRS samples of tax returns, accounting for births, deaths, and overlap of sample units between years due to permanent random number sampling.

Internal Revenue Service—consulted on variance estimation for raking estimators used in the Statistics of Income samples of business tax returns.

Internal Revenue Service—consulted on the use of model-based sampling and estimation by taxpayers in estimating amounts of depreciation to be claimed on business tax returns and on stock basis valuations. He advised IRS on methods for computing confidence intervals on error rates in cases where no sample errors are observed. Dr. Valliant has also conducted a training class for IRS audit staff on model-based estimation.

Robert Wood Johnson Foundation—consulted on estimation in a school survey to measure childhood obesity; derived methods of weighting school districts in a sample where schools were primary units; supervised calculation of weights based on general regression estimators. Redesigns probability proportional to size samples of public and private schools to transition to stratified simple random samples to facilitate rotation over years.

Regression Diagnostics for Survey Data—Dr. Valliant and his Ph.D. students developed diagnostics for linear models estimated from survey data. Topics include outlier identification, residual analysis, leverage measures, and group-wise influence measures. This work is being performed with grant funding from the National Science Foundation.

Model-based Properties of Replication Variance Estimators—Dr. Valliant is investigating how the use of models can improve the implementation of jackknife and balanced repeated replication variance estimators with grant funding from the National Science Foundation.

National Center for Health Statistics—Dr. Valliant consulted with NCHS statisticians on the effects on bias and variance of collapsing cells in raking estimation. He designed and programmed simulation studies in addition to developing theory. He also conducted a training class in the R language for NCHS staff.

Bureau of Transportation Statistics— Dr. Valliant designed alternative RDD and area probability samples of the American Travel Survey. The technical report on alternatives reviewed whether previous designs met target precision goals, calculated sample sizes needed to meet goals, and compared costs of alternatives.

Department of Defense, Office of the Undersecretary—Dr. Valliant designed surveys of military and civilian women to estimate the incidence and prevalence of

domestic violence. The sample allocations were controlled to obtain efficient estimates for single and married women, and other domains like the military services.

Army Research Institute—He consulted on the design and analysis of a survey of Army Reserves who were mobilized to serve in Operation Iraqi Freedom.

Center for Excellence in Health Statistics—Dr. Valliant directed the analysis of data from state and national surveys measuring the prevalence of internet usage and its relationship to economic and health characteristics.

Center for Mental Health Studies, Substance Abuse and Mental Health Services Administration—Dr. Valliant evaluated the sample design for the Survey of Mental Health Organizations (SMHO), including calculations to determine if precision targets were met and whether a measure of size used for PPS sampling was efficient.

National Center for Education Statistics—Dr. Valliant designed and directed the programming of simulation studies of properties of alternative methods of variance estimation in the presence of imputed survey data (in collaboration with Westat). Techniques studied were model-assisted, jackknife, and multiple imputation variance estimation.

Defense Manpower Data Center—Dr. Valliant has a continuing consultation agreement with DMDC. The topics on which he has written detailed reports include assignment of weights in the Status of Forces Surveys (SOFS), analysis of longitudinal data collected from those surveys, design of rotating panel surveys for SOFS, construction of a leading indicator of retention in the armed forces, and factor analysis using complex survey data.

Westat 1998-2003

Internal Revenue Service Disclosure-Proofing—Dr. Valliant consulted with IRS on the methods used to protect confidentiality of individual taxpayers in the 1996-1999 public-use files. Statistical matching of the universe file with the public-use file was used to assess the risk of disclosure. Alternative methods of subsampling were investigated for creating the 1999 public-use, including balanced sampling for matching higher level population moments.

Internal Revenue Service Longitudinal Panel Study—Senior statistician in charge of the design of a panel study of tax returns used by the Office of Tax Assessment and the Statistics of Income Division to project future tax revenues and to study the effects of tax code changes and changes in the taxpayer population over time.

Internal Revenue Service (IRS) National Compliance Survey Redesign—Dr. Valliant directed this project to redesign the sample for selecting taxpayer returns for in-depth auditing. He designed and supervised the implementation of an evaluation of a previous sampling plan. An updated sample was also designed that required estimation of stratum variance components and development of a nonlinear optimization program to meet multiple IRS estimation goals.

Internal Revenue Service (IRS) Reclassification Study—Dr. Valliant was a senior statistician on this study to analyze the effects on estimates of stratum misclassification in the Statistics of Income Division's Corporate Sample. He derived theoretical bias and mean square-error formulas, accounting for the misclassification

mechanism and weight adjustment methods used by IRS, and supervised the empirical evaluation for a set of critical, published statistics.

WesVar Software Development—Dr. Valliant was the chief statistician on the development of this software used to analyze complex survey data. Among the procedures implemented under his supervision have been multinomial logistic regression, plausible value analysis for education test scores, nonresponse adjustments through weighting classes, and enhanced F-test capabilities in linear models.

Commercial Building Energy Consumption Survey—Dr. Valliant was the chief statistician on this project to design a national sample of commercial buildings. He designed a sample of geographic primary sampling units, segments, and buildings within segments. The sample of buildings is multi-phase in which buildings are stratified based on listing information and sampled at rates optimized for different square footage and building use classes.

Pharmaceutical Sales Estimation—Dr. Valliant directed a project to use a sample of pharmacies to estimate numbers of prescriptions filled for specific drugs and number of prescriptions written by individual doctors. General regression and geostatistical estimators were developed to predict sales based on auxiliaries.

Integrated Postsecondary Education Data System (IPEDS) Institutional Prices and Student Financial Aid (IPSFA) Survey—This 1999 survey collected data on certain types of undergraduate students; amounts they are charged for tuition, fees, and room and board; and average amounts of financial aid received by students. Dr. Valliant was the senior statistician on a project to compute weight adjustments to account for nonresponse.

Environmental Protection Agency Imputation Study—Dr. Valliant designed and implemented a method of imputing farm and livestock data in the 1997 Census of Agriculture. Nonparametric regression was used to predict missing values at the county level.

Defense Manpower Data Center Surveys—Dr. Valliant was the senior statistician on a series of projects to create weights for DMDC surveys, including the 1999 Active Duty Survey (Members and Spouses), the 2000 Reserves Component Survey (Members and Spouses), the 2000 Military Recruiter Survey, and the 2001 Work and Gender Relations Survey. He devised weighting plans, including eligibility adjustments, nonresponse adjustments, and poststratification. He supervised the implementation of stratified jackknife variance estimators.

Medical Expenditure Panel Survey—As a senior statistician on this project for the Agency for Health Care Policy and Research, Dr. Valliant supervised the task of matching reports of medical care events from a household survey with those from a parallel medical provider survey. A probabilistic matching algorithm was used to link events on the two files based on comparisons of common data fields and the assignment of measures of the likelihood that a pair of records constituted a match.

National Assessment of Education Progress (NAEP)—Dr. Valliant was a senior statistician on the 1998 State NAEP weighting task and the 2000 State and National NAEP sampling task under contract to the National Center for Education Statistics. The weighting project involved the assignment of base weights to school and student samples, accounting for special student subsampling procedures, nonresponse adjustments at the school and student levels, and assignment of replicate weights for

jackknife variance estimation. State and national school sampling included sample size determination and design of a trial integrated state and national sample.

Evaluating the Use of Technology in Illinois Schools—Dr. Valliant designed and supervised the selection of a sample of public schools for the Illinois State Board of Education to measure the use of PCs, local area networks, the Internet, and other aspects of technology. Principals were surveyed in each school and a second-stage sample of teachers was selected to measure their uses of technology and to identify best practices.

Evaluation of the Transforming Education Through the Arts Challenge—The National Arts Education Consortium and the Getty Education Institute for the Arts fund programs in a number of schools to enhance student learning in the arts. Dr. Valliant designed samples of principals, arts specialists, and arts instructors to evaluate the effectiveness of the arts programs in their schools; to assess the types of professional development being provided to the teachers; and to measure school reform initiatives. He also designed student samples to measure their responses to the arts programs.

Bureau of labor Statistics 1983-1997

Permanent and collocated random number sampling—Designed method of using collocated random numbers to select samples for and control overlap between Current Employment Statistics survey, Occupational Employment Survey, and Occupational Safety and Health survey.

Current Employment Statistics variance estimation—Consulted on methods of replication variance estimation to reflect imputations done for nonrespondents, particularly among units that were certainty sample selections but did not respond.

Consumer Price Index—Conducted a theoretical investigation of the “formula bias” problem in the CPI induced if weights are calculated in such a way that the target population Laspeyres index is improperly estimated. This work supplemented economic study that found that the CPI was a slight overestimate of the desired population index.

General purpose estimation software—Reviewed and wrote report summarizing estimation procedures in all BLS surveys that were candidates for use of general purpose estimation software. Report identified estimation steps common to the surveys and described generalized regression estimation as way of covering all surveys.

General purpose sampling software—Wrote general purpose sample selection software using SAS macro language and SAS/IML for use in BLS. Selection methods included simple random sampling with and without replacement, Poisson sampling, Bernoulli sampling, systematic probability proportional to size sampling, Durbin’s method, systematic equal probability sampling all of which could be used with or without stratification.

Employment Cost Index/Employee Benefits Surveys sample allocation—Applied mathematical programming techniques to the problem of joint optimization of the sample allocation to two surveys using the same sample.

Consumer Expenditure Survey calibration estimation—Applied method of calibration estimation with weight constraints to estimation of means and totals of consumer expenditures. The calibration method solves the problem of assigning a single weight to a household while adhering to population control totals for persons. This method was adopted for production estimation in the CE Survey.

Consumer Price Index Housing Survey—Consulted on various parts of the rent and rental equivalence indexes including selection of the segment sample of households, imputation of missing data, and alternative forms of the index estimator.

Current Employment Statistics sample allocation—Compared different methods of optimal sample allocation using mathematical programming algorithms for minimizing a nonlinear objective subject to nonlinear constraints.

Current Population Survey estimation—Consulted on use of adjusted 1990 Census counts for post-strata control totals.

Compensation and Wages surveys quantile estimation—Evaluated alternative methods of estimating variances of sample estimates of wage quantiles, including linearization and balanced repeated replication methods.

Current Population Survey generalized variances—Consultation on methods of variable selection for development of generalized variance functions. Served on CPS redesign committees to develop recommendations on use of Computer Assisted Telephone Interviewing.

International Price Program estimation—Evaluated proposals for combining index estimates from different panels of establishments in the Import and Export price programs. Consulted on plans to produce monthly in addition to quarterly estimates for imports and exports.

Laspeyres Price Index estimation—Developed theory for and empirically studied a new class of estimators of Laspeyres price indexes. Conducted simulation study of estimator performance using data from the CPI as a test population. Consulted on sample reduction options as result of budget cuts. Evaluated alternative methods of housing index estimation.

Producer Price Index sampling and variance estimation—Consulted with PPI staff on establishment sampling and variance estimation methods for a revision of the PPI. Advised on properties of different choices of balanced half-sample variance estimators. Evaluated methods of smoothing index variances over time.

Current Employment Statistics variance estimation—Consulted on alternative random group and jackknife replication variance estimators.

Computer procurement and support—In charge of microcomputer and Unix hardware and software acquisition and maintenance for the Office of Mathematical Statistics in the Bureau of Labor Statistics. Experience includes purchase, installation, and use of 80286, 80386, and 80486, and Pentium PC's, a Sun Unix workstation, memory boards, disk drives, printers, and applications software.

Arthur Young & Company 1980-1981

Customs Effectiveness Measurement Program—Project manager of a project for the U.S. Customs Service to design and test procedures for sampling cargo line items for intensive inspection at the port of Philadelphia. The project produced ship sampling and cargo subsampling procedures and software to be used by Customs inspectors.

Commercial and Family Disputes Study—Project manager and survey statistician on a study for the U.S. Dept. of Justice to examine the changing role of the state courts in adjudicating family and commercial disputes. By examining five state courts and a sample of 6,000 cases during six two-year periods since 1900, changing caseloads and roles of the courts were estimated and related to demographic and economic data.

Benefit Accuracy Study—Statistical analyst on a study for the U.S. Railroad Retirement Board (RRB) to collect and analyze data to evaluate the accuracy of benefit payments to RRB annuitants and to recommend quality control procedures. Designed the plan of analysis and method of coding inaccuracies of eligibility determination.

Survey of Postsecondary Schools—Survey statistician on the design of a national sample of schools for the National Center for Educational Statistics. The project involved the selection of a sample of schools with probabilities proportional to enrollment, selection of a subsample of students within the sample schools, and conduct of a mail survey.

Westat 1975-1980

Nonresidential Building Energy Consumption Feasibility Study—Manager of this for the U.S. Dept. of Energy to test the feasibility of collecting detailed technical data on energy consumption characteristics and environmental systems of commercial buildings. Responsibilities included the design of a four-stage area probability sample, design of samples from utility company customer lists, and development of a pool of data items in conjunction with engineering and architectural consultants.

National Interim Nonresidential Building Energy Consumption Survey—Survey statistician on the design of a national interim survey of nonresidential buildings to collect data on structural, occupancy, and energy consumption characteristics for the U.S. Dept. of Energy. Duties included the statistical analysis of pilot test results prior to the national survey, the design of a four-stage national area probability sample of 5,000 buildings with supplementation from independent lists, and derivation of appropriate estimation procedures.

National Market Research Establishment Survey—Survey statistician and analyst on the design of a national survey of business establishments for the Xerox Corporation. A four-stage national area probability sample was designed and implemented in two consecutive years. The design used extensive field listing of 90,000 establishments and a version of double sampling to obtain an efficient design for the estimation of annual totals and year-to-year changes. Participated in all phases of the design and developed and implemented a hot-deck imputation procedure for missing data and a balanced half-sample procedure for variance estimation.

National Hospital Sample—Manager of a project to redesign a national sample of hospitals to estimate the frequencies of product-related injuries for the U.S. Consumer Products Safety Commission (CPSC). Responsibilities included the compilation of an

updated sampling frame, development of a detailed cost function, determination of an optimum sampling plan for hospitals and cases within hospitals, and selection of a sample of 130 hospitals.

Evaluation of CPSC Injury Estimates—Manager of a study to evaluate the CPSC program to make national estimates of product-related injuries based on a sample of hospital emergency rooms. Duties included evaluation of nonsampling errors, reporting biases, data quality in the CPSC program and an independent set of data from the National Health Interview Survey.

Biomedical Price Deflator—Analyst on a project to develop a price index for expenditures for biomedical research and development for the National Institutes of Health. Duties involved the use of secondary data sources on wage and price trends to develop weights and indexes appropriate to biomedical R&D expenditures in the public and private sectors.

Consumer Expenditure Survey—Analyst on a project with the U.S. Bureau of Labor Statistics to develop a continuing survey of consumer expenditures to be used in updating the weights for the Consumer Price Index. Responsibilities included evaluation of alternative estimators of annual totals and change from a rotating sample. The project also evaluated relative merits of collecting household expenditure data by alternative personal interview and diary techniques and resulted in design recommendations for a continuing survey.
